Synthora

Synthetic Data for Everyone

Generate realistic datasets instantly using powerful templates.
No login. No coding. Just data.

"Think Postman, but for data."

THE PROBLEM

Synthetic data generation is broken for non-technical users

Teams waste days on manual data setup, custom scripts, and copy-paste workflows that don't scale.

Technical Barrier

Generating synthetic data requires coding skills, library knowledge, and CLI tools most business users don't have.

Manual & Slow

Teams rely on spreadsheets, copy-pasted records, and one-off scripts that break every sprint.

No Reusable Patterns

Each project starts from scratch. There are no shared templates or standardized workflows.

Privacy & Compliance Risk

Without easy synthetic alternatives, teams default to using real customer data in test environments.

THE SOLUTION

Synthora makes data generation accessible to everyone

A browser-based platform where anyone can generate realistic datasets using ready-made templates — no login, no coding required.

Pick a Template

Choose from industry-ready templates covering common business scenarios.

Customize Fields

Adjust columns, formats, row counts, and locale to match your exact needs.

Export Instantly

Download production-ready data as JSON or CSV with one click.

Browser-only • No signup • Deterministic output • JSON + CSV • Fully customizable

KEY FEATURES

Built for speed, simplicity, and scale

Every feature is designed to reduce friction and let users focus on generating the data they need.

Full Build Experience

End-to-end schema design, preview, and export in a single workflow.

Industry-Ready Templates

Pre-built templates for finance, healthcare, retail, HR, and more.

Multi-Format Export

Generate data in JSON, CSV, or other formats ready for downstream tools.

Template Customization

Business users can modify templates to match specific scenarios and requirements.

Browser-Only Solution

No installation, no backend, no dependencies. Open and start generating.

Deterministic Generation

Seeded output ensures repeatable, predictable datasets for testing and validation.

HOW IT WORKS

Four steps from zero to production-ready data

01 → 02 → 03 → 04

Choose Template

Browse industry templates or start with a blank schema.

Configure Fields

Set data types, locales, row counts, and seed values.

Preview Output

Inspect generated rows in a live table before exporting.

Export & Use

Download JSON or CSV and plug directly into your workflow.

USE CASES

One platform, many data needs

Synthora serves diverse teams across the enterprise with a single, intuitive workflow.

Synthetic Data for AI/ML

Generate training and fine-tuning datasets to build better models without real PII.

Test Data at Scale

Create thousands of realistic records for QA, regression, and load testing.

Demo Environments

Populate dashboards, apps, and prototypes with believable sample data.

API Mocking

Seed request/response payloads for frontend development and integration testing.

Compliance & Privacy

Replace sensitive production data with safe synthetic alternatives.

Onboarding & Training

Prepare sandbox environments with realistic data for new team members.

Different teams, one shared workflow

Business Analysts

Generate scenario data for reporting and analysis without technical help.

QA Engineers

Build repeatable, deterministic test datasets for automation pipelines.

Product Managers

Populate prototypes and demos with realistic data for stakeholder reviews.

Developers

Seed databases and mock APIs faster than writing setup scripts.

Data Scientists

Create synthetic training data for ML models without PII concerns.

Synthora removes the technical barrier — any team member can generate the data they need.

SI OPPORTUNITY

A ready-made platform for System Integrators

Synthora offers SIs a unique opportunity to build vertical data solutions at a fraction of the usual cost.

Custom Templates

Build scenario-specific templates for banking, insurance, telecom, and retail verticals.

Ready-to-Use Deliverables

Ship pre-configured data generation workflows as part of implementation packages.

Massive Cost Savings

Reduce test data preparation time from days to minutes, lowering project overhead.

Client Self-Service

Business users at client sites can extend templates without going back to the SI.

Template Setup
< 30 min

Data Gen Time
Seconds

Client Training
< 30 min

Cost Reduction
Up to 80%

What makes Synthora different

The competition requires setup, accounts, or coding. Synthora removes all three barriers.

Capability	Synthora	Traditional Tools	Custom Scripts
No login required	✅ **Yes**	❌ No	❌ No
No coding needed	✅ **Yes**	❌ No	❌ No
Browser-only	✅ **Yes**	Partial	❌ No
Ready-made templates	✅ **Yes**	Limited	❌ No
Deterministic output	✅ **Yes**	Varies	Manual
Multi-format export	✅ **JSON + CSV**	Varies	Manual
